

## Red Rope Indigenous Access Solutions Pty Ltd

---

Indigenous-led Rope Access and Industrial Services for High Risk Environments

Red Rope Indigenous Access Solutions Pty Ltd is an Indigenous-led rope access and industrial services provider. We deliver safe, efficient and compliant solutions for oil and gas, mining and renewables projects across Australia.

## Who We Are

---

**Red Rope Indigenous Access Solutions combines technical strength with Indigenous governance**

**Red Rope Indigenous Access Solutions Pty Ltd** is an Australian private company formed as a joint venture between:

- **Red Rope Access Pty Ltd** – IRATA rope access training and operations provider based in Wangara, Western Australia. Red Rope operates an established IRATA training facility and is recognised by IRATA as both a full trainer and full operator member.
- **Indigenous Access Solutions (IAS)** – Indigenous-owned rope access and industrial services provider focused on shutdown critical work at height and in confined spaces for mining, energy, infrastructure and industrial clients.

Together, the partners have created Red Rope Indigenous Access Solutions Pty Ltd to give clients a single Indigenous-led provider that can train, mobilise and manage rope access technicians, trades and rescue teams under one governance structure. The joint venture aligns with Indigenous Procurement Policy and social procurement frameworks, and is designed to help clients achieve operational outcomes and Indigenous participation objectives through the same work packages.

# Our Value Proposition

---

## Integrated Indigenous-led access solutions reduce risk, downtime and complexity

Red Rope Indigenous Access Solutions exists to make high risk work safer, simpler and more productive for operators.

Clients gain:

- **One integrated provider**

Rope access, trades, coatings, inspections and emergency response are delivered under one Indigenous-led entity, which reduces interfaces and handovers between separate contractors.

- **Reduced risk and downtime**

IRATA supervision, embedded rescue capability and shutdown ready planning lower exposure for people and plant and keep assets available.

- **Operational confidence**

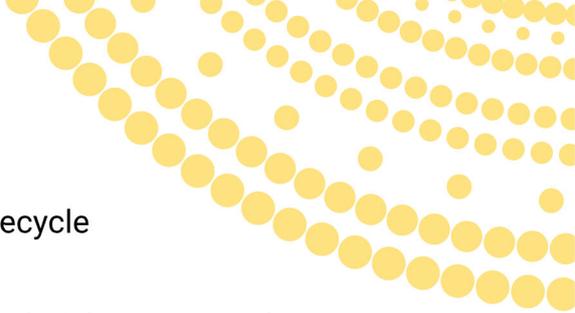

Training and operations are managed by an IRATA member company, giving your leadership and HSE teams assurance that access work is being carried out to recognised industry standards.

- **Measurable Indigenous outcomes**

Indigenous governance, employment, training and procurement pathways are built into service delivery, so clients can demonstrate real progress against RAP, ESG and social procurement commitments.

# Core Capabilities

Core capabilities cover the full rope access and industrial service lifecycle

Red Rope Indigenous Access Solutions offers a complete suite of high risk access and industrial services that can be combined into tailored project solutions.

- **IRATA Rope Access Services**

Red Rope IRATA member company status and Level 1 to Level 3 technicians provide safe work positioning at height and in difficult access locations. Rope access services cover inspection, maintenance, repairs and project works across onshore and offshore facilities.

- **IRATA Training and Competency Development**

Red Rope operates a dedicated IRATA training facility in Wangara that delivers Level 1, Level 2 and Level 3 courses. This provides a pipeline of job ready technicians for client projects and supports Indigenous workforce development through structured training pathways.

- **Emergency Response Teams and Rescue**

Emergency response teams provide working at height and confined space rescue coverage. Pre rigged rescue systems, standby teams and clear rescue plans are built into work scopes so that high risk tasks always have an appropriate response capability in place.

- **Rigging, Boilermaking, Welding and Mechanical Fitting**

Trade qualified riggers, boilermakers, welders and mechanical fitters support shutdowns, maintenance and project work. Services include pre shutdown rigging, heavy lifts, structural repairs, mechanical changeouts and reinstatement.

- **Painting and Coatings Inspections**

NACE-certified coating inspection and QA/QC documentation to verify coating integrity and compliance. Surface preparation and coating system installation for asset protection and remediation

- **Alternative Access Systems and V-Deck**

Suspended decking and modular access systems complement rope access operations for areas where extended duration work or multiple trades need safe standing platforms.

- **Non Destructive Testing (NDT)**

NDT services including visual, MT, PT, UT and other appropriate methods can be delivered using rope access techniques, allowing efficient defect detection on structures and equipment at height.

- **Blade Inspection and Repairs for Renewables**

Specialist teams carry out blade inspection and composite repairs for wind turbines, helping maintain generation capacity and extend the service life of renewable assets.

# Safety, Compliance and Assurance

## Safety, IRATA compliance and ISO aligned systems underpin every task

Safety is the foundation of every service delivered by Red Rope Indigenous Access Solutions.

- We work in line with the IRATA International Code of Practice and Training, Assessment and Certification Scheme.
- Work planning incorporates risk assessments, SWMS or JSEA, and integration with site permit to work systems.
- Supervisors are experienced rope access professionals who ensure adherence to client HSE procedures and relevant Australian WHS legislation.
- Toolbox talks, pre start checks, equipment inspections and competency verification are standard practice.
- Testing, inspection and incident reporting frameworks support transparency with client HSE and leadership teams.

This framework gives clients confidence that high risk work is being managed to recognised industry standards, with documentation to support internal and external audits.

## Detailed Service Focus

### Rope access operations keep complex work fronts moving

Rope access technicians provide efficient access to structures, pipe racks, tanks, stacks and process equipment where traditional access is slow or impractical. Work scopes include:

- NACE coating inspections, NDT and V-deck solutions
- Support for mechanical, electrical and instrumentation work fronts
- Assistance with rigging and lifting in restricted spaces
- Integration with site permit to work and isolation systems

The result is safe, controlled access to work areas without excessive scaffold or long mobilisation periods.

### Rescue ready ERT and confined space coverage protect your people

High risk work at height and in confined spaces is always supported by appropriate rescue capability. Red Rope Indigenous Access Solutions:

- Develops site specific rescue plans
- Installs and tests pre rigged rescue systems before work commences
- Provides trained standby rescue personnel dedicated to response duties
- Integrates with client emergency response and HSE teams

This approach gives supervisors and workers confidence that there is a clear plan and competent people ready if an incident occurs.

### Coatings, blasting and inspection extend the life of critical assets

Industrial blasting, painting and coating services address corrosion, coating failures and structural degradation. Our teams:

- Prepare surfaces using methods suited to the asset and environment
- Apply approved coating systems in line with manufacturer requirements
- Carry out inspection and testing with appropriate documentation
- Coordinate access so that coatings work fits efficiently within shutdowns and maintenance plans

Clients gain improved asset integrity and reduced risk of unplanned failures.

## Indigenous Governance, Participation and Community Outcomes

---

### Indigenous governance delivers real participation and community benefit

Red Rope Indigenous Access Solutions is Indigenous-led and structured to deliver meaningful Indigenous outcomes through core project activities.

- Indigenous leadership influences strategic decisions, workforce planning and local engagement.
- Employment pathways are created for Indigenous workers into rope access, trades and support roles, supported by IRATA training opportunities.
- On projects, the joint venture seeks to engage Indigenous suppliers where practical, reinforcing local economic benefit.
- Reporting on Indigenous participation can be aligned with client RAP and ESG frameworks, making it easier for clients to demonstrate progress against commitments.

Clients gain a provider that supports operational requirements and contributes to long term community benefit in the regions where they operate.

# Industries Served

---

## Mining, oil and gas and renewables rely on our integrated access services

Red Rope Indigenous Access Solutions supports high risk work across several sectors:

### Oil and Gas – Onshore and Offshore

Rope access, ERT, trades and inspection services for offshore platforms, FPSOs, terminals and onshore processing plants. Teams are familiar with permit systems, marine environments and offshore safety expectations.

### Mining and Resources

Shutdown and maintenance support for conveyors, crushers, stackers, reclaimers, tanks and process infrastructure. Rope access and trades are combined to keep production assets available and reduce unplanned downtime.

### Renewable Energy

Blade inspection and composite repairs, tower and nacelle access, and structural maintenance for wind farms, plus access and coatings services for solar and hydro infrastructure.

### Infrastructure and Industrial Facilities

Work at height and in confined spaces for bridges, ports, tanks, silos and industrial plants, delivered with a focus on minimising disruption to operations and stakeholders.

# Geographic Footprint and Mobilisation

---

## East and West Coast bases mobilise quickly across Australia

Red Rope Indigenous Access Solutions operates from:

From these bases the joint venture can mobilise rope access teams, trades and ERT capability to onshore and offshore projects nationwide.

## Insurances, Certifications and Registrations

---

### Insurances and registrations give you assurance from day one

Red Rope Indigenous Access Solutions operates with appropriate corporate registrations and insurances in place.

- **ABN:** 15 693 486 690  
**Entity name:** Red Rope Indigenous Access Solutions Pty Ltd  
**Entity type:** Australian Private Company, registered in Queensland.

Standard insurances & professional indemnity for work at height and industrial operations are maintained, including public liability, workers compensation and other covers as required for specific client contracts. Evidence of current policies can be provided during prequalification or tender processes.

We provide assurance that training and rope access operations meet IRATA international industry benchmarks.
